

Make a Skeleton

Cut out the skeleton pieces below.
Can you put the skeleton pieces back together to form the human body?

FUN FACT!

Our superhero researchers at Telethon Kids use lots of different types of body imaging to see inside the body. They can easily and painlessly look inside to your bones, organs and brains using special machines. **X-rays** are used to take pictures of bones and some parts inside the body, including the lungs. X-ray beams pass through your body and they are absorbed in different amounts depending on the density of the material they pass through.
